Float voltage varies depending on battery type (i.e. flooded cells, gelled electrolyte, absorbed glass mat), and ranges from 1.8 V to 2.27 V. Equalization voltage, and charging voltage for sulfated cells, can range from 2.67 V to almost 3 V. (only until a charge current is flowing) Specific values for a given battery depend on the design and manufacturer recommendations, and are usually given at a baseline temperature of 20 ° C (68 ° F), requiring adjustment for ambient conditions.
